Krownlandia Built so far

A community-inspired virtual world for exploring, learning, resting and collecting memories.

Snapshot: November 5, 2026 | Published version 247
Prepared for: Lisa Chandler

What exists today

Krownlandia Gateway is a playable browser-based 3D prototype with a castle-centered park, rides, community places, village homes, themed lounges, rewards stations, keepsakes and saved visits. Visitors can walk, ride the tram, sit in the world, explore short activities and capture their view.

The project now includes **15 visitable homes** and **23 themed lounges**, according to the current project inventory and deterministic walkthrough notes. These are prototype spaces, not shared property reservations or live player counts.

Built on an older community vision

Krownlandia predates this software prototype. The project records its community origin as January 22, 2020, in the KROWN DAC and Token Telegram community. Lisa Chandler (@lisachandler) is credited as designer; @gorayii is credited with the name. Original community place credits are preserved, while new interpretations and recent additions are identified separately.

How to read this report

Built means present in the published implementation and project records. It does not mean every feature has been verified in a live browser. Automated checks cover many interaction and save behaviors; a signed-in test-visitor walkthrough is still pending.

Open Krownlandia Gateway

The park and its places

Castle and park hub. A central castle setting connects the visitor experience, including Roasted, pathways, scenery and rewards. Day and night views change the atmosphere throughout the world.

Lisa's Coffee Shop. The pink-and-black cafe includes drink interactions, seating, a themed patio, rewards and a collectible pin. Storefront, furniture, counter equipment, menu, materials and evening lighting have received successive detail passes.

Roasted and circus popcorn. The castle restaurant offers virtual roasted vegetables and a container-return interaction. The circus includes a popcorn stand. These are simulated food experiences without purchases.

Community Office Garden. A sheltered work area and outdoor terrace with white arches, seats and an idea board. The board connects to built community places. Original place contribution: @lisachandler.

Town Square. A community board, covered stage, controllable stage lights, benches, welcome story, rewards and Festival Lounge. The board also opens the event calendar and directions to nearby places. Original place contribution: @lisachandler.

Library of Alexandria. An open reading hall with shelves, chairs, terrace benches and three prototype community readings. Saved page progress, a next-unexplored-page shortcut and the Alexandria Bookmark support a short discovery activity. Original place contribution: @Jauregui9821.

Community Produce Garden. Vegetable beds, benches and a one-time watering activity connect to rewards and the Harvest Nook. Original place contribution: @lisachandler. This is not a real crop-growth simulation.

Other community destinations. A giant-tree Krownlandia Clubhouse, General Store, Making of Krownlandia Garden, Krown Bridge and Magic School extend the world. Krown Bridge credits @ed033; Magic School credits @elizabeths14. Their implemented designs are prototype interpretations.

Community-linked pavilions

The Living Sim Portal and Emoji House provide deliberate external links to the requested living simulation and Signal sticker pack, with @maxigram shown as place manager. This credit does not grant account permissions. The living simulation is not embedded or synchronized, and the sticker artwork has not been imported as the game's emoji system.

Rides, villages and rest

Safari ride. Six habitat stops feature stylized animals, optional field-guide notes, observation prompts and saved sightings. Recording all six groups earns a Safari Field Notebook; the ride-completion pin remains a separate achievement.

Circus performances. A locally started, three-act show has an optional program, audience seating and directions to popcorn and the circus lounge. It is not a live human performance stream.

The Great Journey. A chapter-based ride uses exhibits, visitor-controlled progression and a completion reward, with onward directions to its lounge.

Magic School. The lantern classroom offers a short pattern lesson and seated participation through the existing interaction system.

Eldergrove. The Great Elder Tree clearing, woodcraft shelter and herb garden form a three-stop discovery trail. Recording every stop earns the Woodcarved Leaf. Timber homes, gathering spaces, a tram stop and forest rest areas extend the village. Herb displays are fictional exhibits, not treatment advice.

Riverbend. A riverside preview, three cottages, pottery courtyard, rest areas and Krown Bridge create another visitable village area. A locally started lantern-boat procession can be watched from the bank or a bench; it is a scenic preview, not an announced festival.

Homes and personalization. The original prototype housing remains alongside Eldergrove and Riverbend homes. Visitors can select a device-local home, enter rooms, choose decor palettes, display a collected keepsake, relax on furniture and use porch lighting preferences. Mailboxes contain prototype welcome notes, not messages from other players.

Sit, rest and look around. Chairs, sofas, benches and beds use an anchored viewpoint with a separate stand-up action. View options include facing forward, looking up and taking a photo. Nearby-rest and scenic-seat directions lead to clear approaches without automatically sitting the visitor.

Themed lounges. Lounges offer virtual snacks, souvenirs and places to relax. Food and lounge directories connect them to attractions, discovery walks and rewards stations.

Atmosphere

Blended day/night lighting, porch lanterns, interior pendants, stars, fireflies, flowers and material details enrich the scenes. Reduced-motion preferences affect transitions. The world remains a stylized prototype; photorealism and measured live frame-rate gains are not claimed.

Progress, controls and cameras

Finding the way. A searchable Park map, walking guidance, five-stop village tram, Community/Riverbend/Eldergrove walks, food directory and searchable help connect the park. Filters help visitors find ready rewards, unfinished activities and nearby rest stops.

Rewards stations. Arrival and task points are claimed through station interactions. Activity completion and reward collection stay distinct; directions alone do not award points. One-time markers prevent repeated claims from inflating progress.

Keepsake journal. Pins, bookmarks, lounge souvenirs and discovery keepsakes can be reviewed, revisited and displayed at home. The journal includes partial discovery progress and the safari notebook.

Personal points over time. Rewards includes this hour, today, this month, this year and all-time totals using Pacific Time. These are private browser-local records, not a public or server-verified leaderboard. Older undated claims remain in all-time totals without invented dates.

Saved visits and backups. Browser-local progress supports returning visits, rewards, home choices and decor. Export/import tools preserve supported progress, including older backup formats. Storage limitations are surfaced; there is no claim of cross-device account synchronization.

Compact, optional interface. Clear view, collapsible details, scrollable panels, keyboard interactions, focus handling and search reduce obstruction. Panels coordinate with walking and rides, while safeguards reject stale or unavailable actions.

Take photo. Visitors can download a scene-only PNG with place, day/night and capture time in its filename. Recovery handles unavailable graphics, stalled encoding and page departure. Photos exclude menus.

Record video. A visitor-started recorder captures up to 30 seconds of the 3D canvas, with preview, manual download and discard. It records no microphone, webcam or menus and uploads nothing. Browser-supported encoding is required; clips are temporary and excluded from progress backups.

Recent improvements in this snapshot

Versions 239-247 added Library and Produce Garden anytime directions; clearer garden reward status; accessible Library readings and next-page guidance; direct terrace-bench directions; Eldergrove seated-discovery guidance and searchable help; and photo cancellation when leaving the page.

Status, limits and next steps

Administration and events

An owner-protected activity page provides a searchable publication-history snapshot with evidence and CSV export. It records build/publication information; it is **not an activity log of all human or agent visitors**. It does not identify a publisher as human or agent without supporting evidence.

The optional What's happening calendar supports confirmed event announcements, Pacific-time labels, cancellation/postponement states and anytime activity directions. The production event list is currently empty pending confirmed details. A scheduled time does not verify a host's presence.

Not yet established

Shared multiplayer visibility, real visitor presence, synchronized accounts, public verified leaderboards and comprehensive visitor auditing are not implemented. Resident characters should not be mistaken for other connected players. External portal accounts and progress remain separate.

Validation and the next review

Deterministic walkthroughs and focused checks cover rides, seating, navigation, reward eligibility, keepsakes, homes, backups, help and admin authorization. Production builds and packaged assets have been checked. These checks do not establish GPU appearance, real-browser audio, video encoding/playback or screen-reader behavior.

Lisa plans to provide a test visitor account. The next useful review is an authorized signed-in walkthrough: entrance and resume flow, movement, panel obstruction, day/night visibility, attraction interactions, seating, photo/video behavior and small-screen controls. Scene recordings help with world visuals; ordinary screenshots are needed for menus and controls.

Source and publication record

This report summarizes the project's COMMUNITY_DIRECTION.md and authored implementation in dist/, with publication provenance from Sites. Snapshot: version 247; source commit 6aef44b420c8e520941c2f4cf5ab9fb16630f59b. It is a feature summary, not a full change log or a new legal, accessibility or performance certification.

Historical references recorded by the project:
www.krownlandia.com/about
www.krownlandia.com/maps
Original community ideas document
The project also records page-level references to the supplied Krownlandia PDF. Historical sources were not newly re-audited for this summary.
